

# Black Beauty® Patcher

*Combination: Mulch, Seed & Fertilizer*

Jonathan Green Black Beauty Patcher is ideal for bare spot repairs and pet damaged areas in your lawn. It can be used in sunny and/or shady areas. This combination of Mulch, Grass Seed and Fertilizer contains Black Beauty Ultra grass seed, coir and rice mulch and lawn fertilizer to grow an attractive, high-quality lawn.

- Use in sun or shade areas
- Quickly repairs bare spots and pet damaged areas
- Germinates within 14 days
- Mulch bio-degrades into the soil

## FERTILIZER GUARANTEED

**1 - 2 - 1**

SIZE	COVERAGE	ITEM#
3-lb.	130 sq. ft.	#10450
7-lb.	300 sq. ft.	#10451

## DIRECTIONS

Mow the lawn short and remove dead grass and debris from area to be seeded. Rake the soil to create a loosened seed bed. Shake the bag (or jug) prior to application of this product. Spread Patcher on the loosened soil and rake lightly to achieve even coverage. It is important to water the seed bed for sufficient germination of the grass seed and expansion of the mulch to provide soil coverage. Water area daily for one to two weeks, then water once a week, or as needed when mulch dries out. New grass should start to germinate in 10-14 days. Seed germinates once soil temperatures reach 55°F. Patcher mulch will eventually bio-degrade into the soil.

### 1. PREPARE

Remove dead grass and debris from the area to be seeded. Rake lightly to loosen the soil. This creates a good seed bed.

### 2. APPLY

Spread Black Beauty Patcher evenly on the loosened soil.

### 3. WATER

Water the bare spot gently allowing the mulch to absorb it. Avoid the pooling of water. Keep the Patcher moist until the grass has germinated and grown to at least 2 inches.
